Description This subject is designed to extend the employability, professional skills and networks of students. Every year, a range of options will be offered to students. These may involve activities as diverse as group research projects with existing available databases; simulation projects with 'real world' problems determined in partnership with an external agency or internal Western organisational subject; the development of a small-scale event that services a School objective and a community need; or a disciplinary or inter-disciplinary capstone project. The common objective is the development of students' skills in collaboration and team work through a focus on authentic tasks and problem-solving.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse a current community, organisational or professional need or problem.
2. Work effectively in teams to design and deliver a group project in response to an identified need or problem.
3. Apply advanced level disciplinary, or inter-disciplinary, skills and knowledges to "real world" problems.
4. Communicate project outcomes effectively in appropriate formats.
5. Reflect on their implementation of the task, its value to society, and their personal and professional knowledge and skill development.

Subject Content

1. Identification and analysis of a contemporary problem, or challenge, suitable for a semester-long group project.
2. The design and implementation of a semester long group project.
3. Communication of the project outcomes in appropriate formats.
4. Reflection on the group process and outcomes of the project.
5. Self-reflection on the roles undertaken, and the personal and professional benefits of participation.
