Learning Outcomes

On successful completion of this subject, students should be able to:

1. Utilise Ecological Footprint principles in the analysis of land-use.
2. Describe the principles of sustainable land-use.
3. Apply the principles of sustainability with respect to land-use.
4. Undertake an analysis at regional, country, enterprise or household level of the impacts of land-use on the environment.
5. Design and develop a computer based calculator for use in predicting the energy consumption of an enterprise.
6. Debate contemporary issues on landuse and the environment, including such issues as carbon emission trading; use of oil, coal and gas; alternative energy; and global warming myths and facts.

Subject Content

1. The theory of climate change and sustainable landuse options primarily for Australian landscapes.
2. Real world examples of relevant landuse activities explored to develop an understanding of the interactions between land-use and the environment.
3. Interactions between land-use, production and consumption.
4. Calculation of the carbon emissions and ecological footprint for an enterprise of choice and with recommendations for improvement with regard to desirable and feasible change.
5. The environmental impact of enterprises and the land equivalent required to sustain such enterprises.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task	Mandatory
Debate - Oral Presentation	30 minutes overall time for the group debate	10	N	Group	
Quiz - Written	2 hours	30	N	Individual	
Project - Written and Oral Presentation	2,000 words and 15 minutes group presentation	60 (45% individual and 15% group)	N	Both (Individual & Group)	

Prescribed Texts
