

# INFO 3006 INFORMATION SECURITY

**Credit Points** 10

**Legacy Code** 300128

**Coordinator** Yun Bai ([https://directory.westernsydney.edu.au/search/name/Yun Bai/](https://directory.westernsydney.edu.au/search/name/Yun%20Bai/))

**Description** Information Security is concerned with the protection and privacy of information in computer systems. The focus is primarily on introducing cryptography concepts, algorithms and protocols in information security and applying such knowledge in the design and implementation of secure computer and network systems. The subject also addresses conventional and public key encryption, number theory and algebra and their application in public key encryption and signatures. Students will learn the application of cryptography algorithms in current computer systems and information security management. This subject also provides students with the practical experience around security programming.

**School** Computer, Data & Math Sciences

**Discipline** Security Science

**Student Contribution Band** HECS Band 2 10cp

Check your fees via the Fees ([https://www.westernsydney.edu.au/currentstudents/current\\_students/fees/](https://www.westernsydney.edu.au/currentstudents/current_students/fees/)) page.

**Level** Undergraduate Level 3 subject

**Pre-requisite(s)** MATH 1006 AND  
COMP 2009 OR  
COMP 2015 OR  
COMP 2016

**Assumed Knowledge**

Basic understanding of data structures and discrete mathematics  
Basic programming skills in C, C++, java, etc.

## Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe fundamentals in computer security and basic knowledge in cryptography
2. Analyse conventional encryption/decryption methods and the concepts of symmetric keys
3. Design and implement block ciphers and stream ciphers
4. Evaluate principles of public key cryptosystems and public key algorithms
5. Master the number theory used in the RSA algorithm, Diffie-Hellman key exchange and digital signatures
6. Develop authentication functions and hash functions in message authentication
7. Construct security protocols for complex scenarios, based on theories and principles of information security.

## Subject Content

Security, cyberattack and countermeasure, cryptography and steganography

Conventional encryption and DES system

Number Theory and algebra, Modular arithmetic and Euclid's algorithm

Public key encryption and RSA algorithm

Digital signature and authentication protocols  
Key distribution and management  
Security protocols and various applications in current computer systems  
Information Security management

## Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task	Mandatory
Practical	up to 5 pages	25	N	Individual	Y
Applied Project	500+ report plus 800+ lines of program code	25	N	Individual	Y
Final Exam	2 hours	50	Y	Individual	Y
